# Spatial Generalized Linear Mixed Models with Application to Prevalence Mapping

## 空间广义线性混合模型及其在预测流行病中的应用

2017 年 6 月 13 日

# 内容提要

# Examples

1. radionuclide concentrations on Rongelap Island
2. childhood malaria in the gambia
3. Loa loa prevalence in Cameroon and surrounding areas

# Introduction

Diggle *et al.* (2002)

- the effects of child level covariates (age and bed net use)
- village level covariates (the primary health care and greenness of surrounding vegetation)
- separate components for residual spatial
- non-spatial extrabinomial variation

$\mathbb{R}^n$

$$\log\{p_{ij}/(1 - p_{ij})\} = \alpha + \beta' z_{ij} + U_i + S(x_i)$$

谢谢！
